SKILLS

Java
Spring Boot
C#
.NET
Python
Django
Javascript
Node.js
Socket.io
Express.js
MySQL
PostgreSQL
React.js
Vue.js
Docker
AWS
Terraform

EDUCATION

Bachelor in Programmering

August 2020 - June 2023

Kristiania, University College, Oslo

EXPERIENCE

Full-stack Developer - APCOA, Oslo
August 2023 - Today

I began my position at Apcoa as the only developer for FacilityAdmin, their master data system that serves as the foundation for all of Apcoa's services. This was a challenging yet incredibly educational start to my development career, as there were no senior developers to learn from. I quickly had to familiarize myself with the codebase to fix existing bugs while also further developing the systems.
Apcoa is leading in Europe onANPR technology, and my role spans a wide range of tasks, including writing SQL queries for customer service, setting up environments on Ubuntu servers, migrating large datasets from external systems to internal ones, and developing the system that manages critical functionalities such as price calculation and parking administration for major clients like Avinor and SIO.
This service is written in Python with Django as the framework. This position has also given me the opportunity to gain experience with Node.js, Vue.js, Jenkins, and NGINX and more.

Backend Developer - Millient Software, Oslo
January 2023 - June 2023

Developed a customer portal for their existing project management system. This involved creating an API using Java and Spring, as well as designing and modeling databases with PostgreSQL.

Senior Advisor - Webhelp Nordic, Oslo
March 2018 - August 2023

First-line IT support. This role sparked my strong interest in technology and strengthened my ability to troubleshoot and effectively communicate technical issues.
